INSECT SCREENS FOR
WINDOWS

TEHROL®

What to consider when choosing an insect screen?

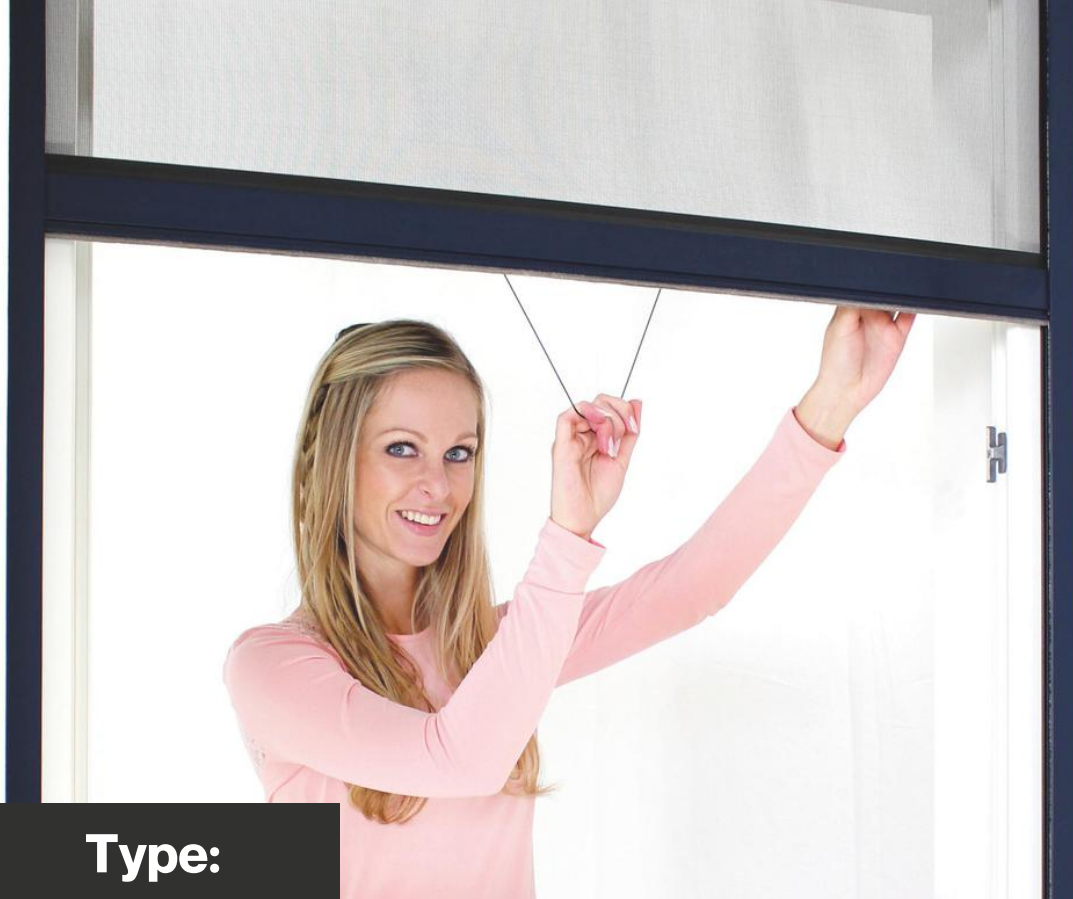

Tips:

Usage: First, consider whether you frequently need access to external balcony sills for tasks such as watering plants or cleaning. In this case, **Rollo insect screens** are the most practical solution, as the mesh can be easily retracted into the top casing with a simple pull of the end bar. This ensures the insect screen is out of sight when not needed and provides easy access to outdoor surfaces. Otherwise, a **Fixed insect screen** is a perfectly adequate solution. A **Fixed insect screen** is permanently attached to the window frame but can be easily removed as a single screen panel.

Window Dimensions: Accurately measure the dimensions of the window, as this can play a role in determining which types of insect screens are most suitable for you. **Pleated insect screens** are an excellent solution for windows of all sizes, from standard to larger ones, as they can be made in larger dimensions. For standard-sized windows, however, roll-up insect screens are the best choice due to their functionality and ease of use.

Outdoor Blinds and Insect Screens: When selecting insect screens, it is important to consider whether outdoor shading is already installed on the windows. In such cases, it is advisable to consult our experts, who can recommend the best solution based on the space between the shading system and the window.

Price Range: Set a budget for purchasing insect screens and explore options that fit within this budget.

Type:

Rollo Insect screen

DIMENSION

- Max. width: 170 cm
- Max. height: 170 cm
- Note: *The maximum dimensions for width and height cannot be achieved simultaneously.*

COLORS

- Profiles available in all RAL colors
- Mesh: Gray, Transpatec

The most popular insect screens for windows

Advantages:

- The best-selling type of insect screen for windows.
- Can be integrated into outdoor blinds.
- User friendly: the screen closes with a gentle pull on the end bar and opens with a light push.
- Built-in brake ensures smooth closing of the insect screens.
- Provides easy access to balcony sills, simplifying plant watering and cleaning.
- Integrated brushes ensure tight and effective sealing.
- Suitable for roof windows as well.
- UV-stabilized mesh made of fiberglass, resistant to UV rays.
- Aluminum profiles available in all RAL colors.

Type:

Fixed
Insect screen

DIMENSION

- Max. width: 200 cm
- Max. height: 200 cm
- Note: *The maximum dimensions for width and height cannot be achieved simultaneously.*

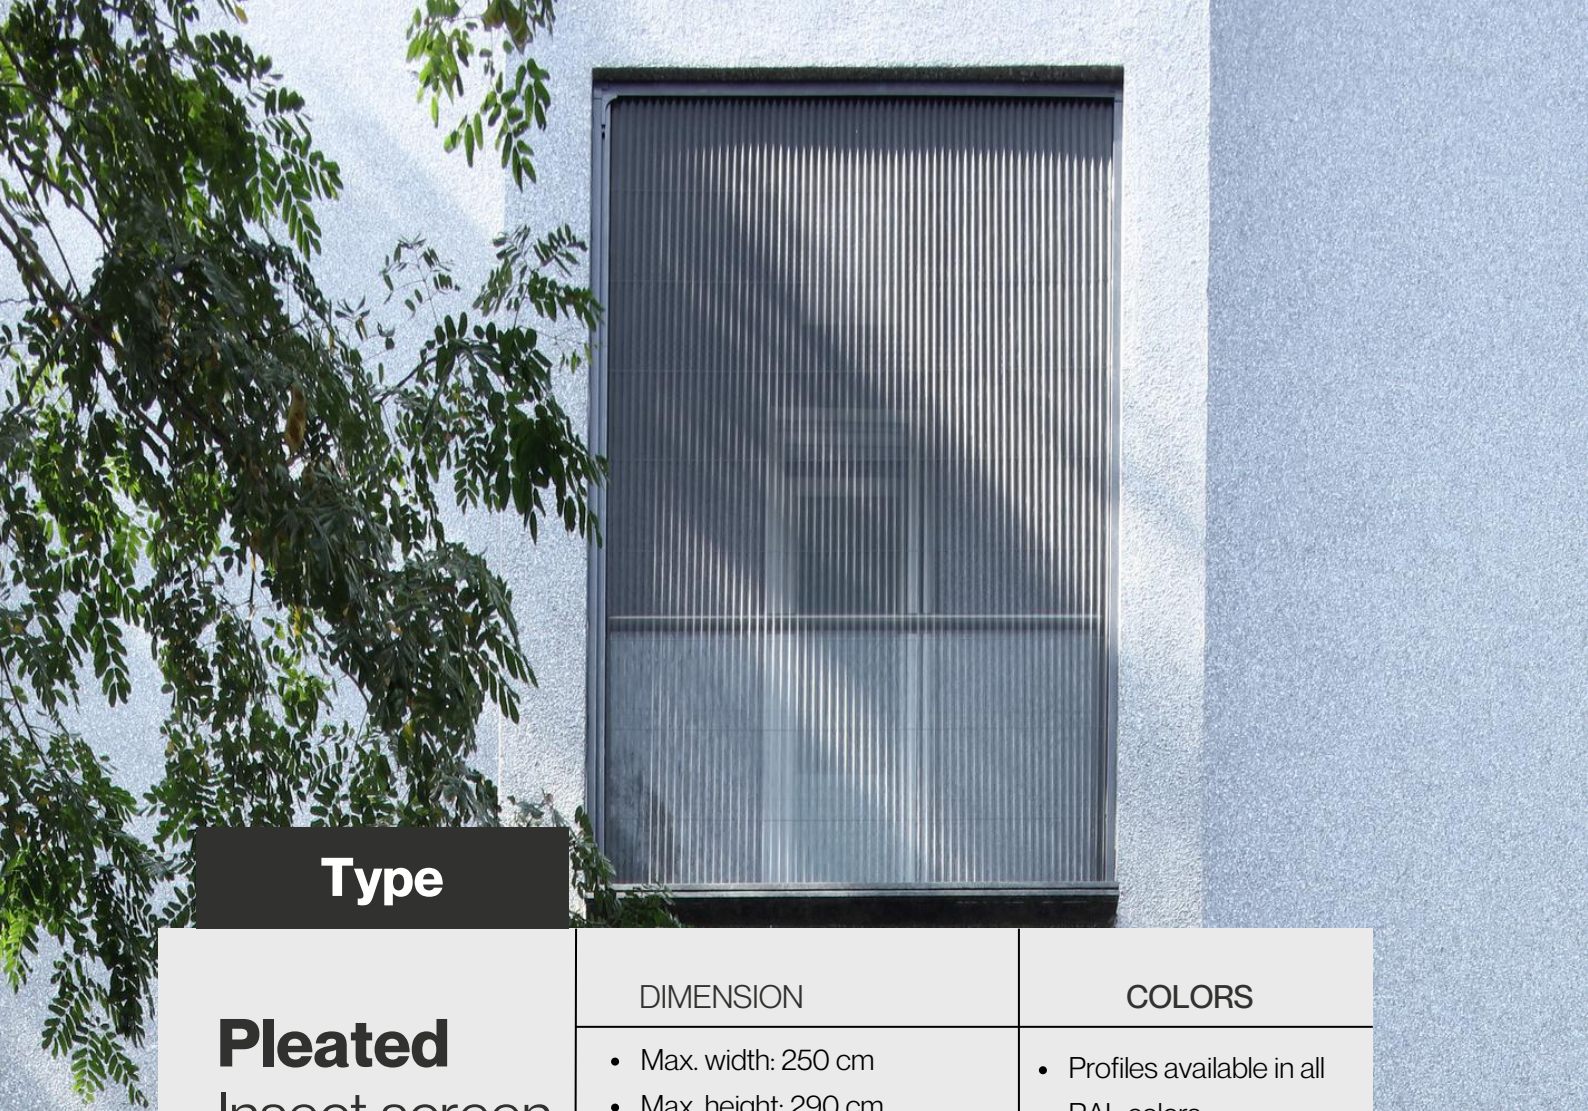

COLORS

- Profiles available in all RAL colors.
- Mesh: Gray, Transpatec, Rodent-resistant

Insect screens with or without screws

Advantages:

- Two types of insect screens are available: a fixed screen, which is mounted to the window with screws and special brackets, and a fixed immersed screen, which is attached to the window frame using rotating fasteners.
- Also compatible with irregularly shaped windows.
- UV-stabilized mesh made from fiberglass and UV-resistant.
- A cost-effective solution.
- Aluminum profiles available in all RAL colors.

Type

Pleated Insect screen

DIMENSION

- Max. width: 250 cm
- Max. height: 290 cm
- Note: *The maximum dimensions for width and height cannot be achieved simultaneously*

COLORS

- Profiles available in all RAL colors
- Mesh: Black and gray

Ideal for windows with larger dimensions

Advantages:

- An excellent choice for protecting larger areas, such as patio doors or panoramic windows.
- A double pleated insect screen is available for even larger dimensions.
- The defining feature of a pleated insect screen is the pleated mesh, which folds neatly to the side into a compact stack.
- When not in use, the screen discreetly folds away to the side.
- UV-stabilized mesh made from fiberglass, reinforced with cords, and UV-resistant.
- Aluminum profiles available in all RAL colors.
